

HEMP.

What Is it?

Hemp is a variation of the Cannabis sativa plant. Not to be confused with its cousin, the marijuana plant, hemp contains under 0.3% of THC and cannot be used recreationally. This resource is friendly to the environment and gives back through its abundance of uses.

Benefits of Using Hemp

- 1 As one of the fastest growing plants on Earth that requires processing by hand, hemp is an excellent commodity for creating jobs and supports our values of ethical labor practices.
- 2 Hemp plants can absorb carbon dioxide to be released back into soil, rather than our atmosphere.
- 3 Hemp fiber creates a long lasting and sturdy material four times as durable as cotton.
- 4 Hemp paper can be recycled up to eight times and requires less harsh chemicals for bleaching.

Did You Know?

Traditional trees take about 100 years to harvest, while hemp plants take just 100 days and produce more oxygen and paper than traditional wood.

How it's Used at Eco Promotional Products, Inc.

Hemp fiber, although sturdy, can produce a fluffy and breathable material seen in our Hemp Crew Neck T shirt, where hemp is blended with cotton to maximize comfort while ensuring sustainability. Did you know you can use hemp in items like buttons and badges? Check out our assortment of hemp items to get a glimpse at just how uniquely multifaceted this resource is.

BEWARE...

A similar sounding name to hemp is viscose hemp, which EPP avoids. Its harsh chemical breakdown and environmentally unfriendly manufacturing process undermines the very purpose of hemp in the first place. This distinction is important as we value informed consumption over illusive marketing to create products that foster real change.
