

"Organic"

What is it?

"Organic" is a term used to denote farming practices in which items are grown and produced without synthetic herbicides and GMOs. Of all the organic resources out there, organic cotton is perhaps the most overlooked, yet most influential. Cotton itself is considered one of the most common fabric types, which means its negative impact on the environment is severe.

Fortunately, organic cotton manufacturing produced in compliance with agricultural standards does not use toxic chemicals, and in turn, uses about 88% less water and 62% less energy than traditional cotton production.

> Now that the benefits of organic practices are clear for fabric, why not extend these regulations onto other products as well?

Our Certified Organic Lip Balm is made using strictly natural ingredients like beeswax and hemp seed oil free from harsh chemicals so your lips stay moisturized and protected at the same

While growing your own herbs is about as green as it gets, the seeds themselves can be filled with synthetic chemicals and pesticides. Our organic line of seeds avoids these harmful additives so your garden isn't just green
