SUDOKU CHALLENGE

A Sharper Mind is Minutes Away!

**Your
Imprint
Here!**

The graphic features a large, light gray gear outline in the center. Inside this gear, the word "SUDOKU" is written in a large, bold, black, hand-drawn style font with diagonal hatching. Below "SUDOKU", the word "CHALLENGE" is written in a smaller, bold, gray, blocky font with a slight 3D effect. Two small lightning bolt symbols are positioned on either side of the word "CHALLENGE". The background is white with a pattern of small gray dots at the top and bottom edges, and several faint, light gray gear outlines scattered throughout.

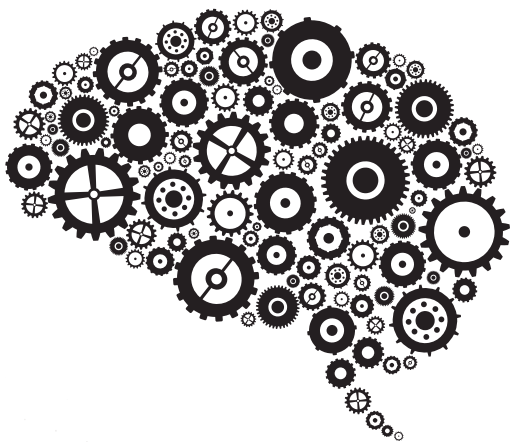

SUDOKU CHALLENGE

THE IMPORTANCE OF A SHARP MIND

There are countless sayings, adages and aphorisms involving the human brain. The mind is a terrible thing to waste, being the most prominent and poignant, speaks directly to the importance of keeping the brain active. But how, exactly, does one keep the brain active?

It's not as if there's a little barbell set out there for the brain. Your brain isn't doing sit-ups and squats. So, how do you train the brain? Knowledge is the answer, of course, but let's be honest: Reading books and doing math problems can be very tedious and boring. Most of us cannot wait until we're out of school; we're in no hurry to jump right back in. That's why brain games are always a great idea – those little fun-to-do mental exercises that keep your brain sharp and your senses alert.

Brain games can actually wake up parts of the brain that are typically dormant in day-to-day life.

The background features a light gray color with a pattern of small, semi-transparent dots scattered across the top and bottom. On the right side, there are several overlapping gear icons of varying sizes, rendered in a light gray, semi-transparent style. The gears are positioned in the upper right and lower right corners, partially overlapping the text area.

THE BENEFITS OF SHARP MIND GAMES

One of the biggest things you learn by solving puzzles of all kinds is the ability to think outside of the box for a solution. This type of thinking literally hardwires the brain to solve tougher problems by examining more than what's typically confined in the narrow scope of problem-solving.

Being mentally sharp and actually exercising the brain helps in many areas. For starters, it helps neurons to fire faster, more frequently, and thus help you make quick work of everyday problems.

Staying sharp and training the brain also increases your overall intelligence. Ever wonder why those super-smart people are so brilliant? What's different about their brains from an average person's brain? It's the ability to absorb and understand knowledge. A trained brain retains knowledge and builds pathways for the recollection of answers.

You may never be trapped on the 85th floor with only 20 feet of rope, a tennis shoe and a pocket knife, but if you are, the sharp mind can craft an out-of-the-box way out of that situation, whereas the dull mind has very limited options.

HOW TO PLAY

Sudoku is a logic-based number puzzle that requires you to fill out a 9 x 9 grid with the missing numbers. To play Sudoku you must fill out the grid so that all the numbers between 1 and 9 appear in each column, row, and 3 x 3 square block only once. To make it easier to see the blocks, they are outlined with a thicker line. There is only one correct solution to a Sudoku puzzle.

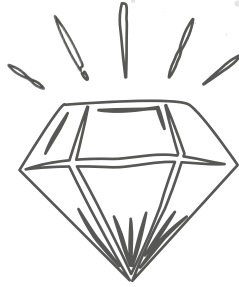

There are Two Commonly Used Strategies:

Counting involves counting the numbers already in place to figure out the missing number. For example, in the middle block you know that the missing number in the middle left cell can't be a 3, 4, 5, 6, 7, 8, or 9 because they are already in the block. It can't be a 2, 5, 6, 7, or 8 because they are already in the column. It can't be 3, 4, or 8 because they are already in the row. So the number must be 1. The other missing number in the block must be 2 because it is the only number not yet used.

Crosshatching involves crossing out the places where a certain number can't go. For example in the middle bottom block you are missing the numbers 4, 6, and 7. You know that 6 can't go in any of the top cells because the 6 is already in that column.
